Auth

api/register

Crea un nuevo usuario y devuelve un token de acceso
Method: Post
Auth: No
form-data:
- email: String
- password: String
- phoneNumber: String
- role: String
- profile_pic: Image

api/login

Autentica al usuario y devuelve un token de acceso
Method: Post
Auth: No
form-data:
- email: String
- password: String

api/logout

Destruye el token del usuario autenticado
Method: Post
Auth: Si

api/profile

Devuelve la información del usuario autenticado
Method: Get
Auth: Si

Cafes

api/cafes

Devuelve todos los cafes
Method: Get
Auth: Si

api/cafes

Crea un nuevo cafe
Method: Post
Auth: Si
form-data:
- name: String
- location: String
- is_open: Boolean
- user_id: Int

api/cafes{cafe}

Devuelve un cafe
Method: Get
Auth: Si

api/cafes{cafe}

Edita un cafe
Method: Put
Auth: Si
form-data:
- name: String
- location: String
- is_open: Boolean

api/cafes{cafe}

Borra un cafe
Method: Delete
Auth: Si

api/cafes{cafe}/orders

Devuelve los orders de un cafe
Method: Get
Auth: Si

api/cafes{cafe}/products

Devuelve los products de un cafe
Method: Get
Auth: Si

Orders

api/orders

Devuelve todos los orders
Method: Get
Auth: Si

api/orders

Crea un nuevo order
Method: Post
Auth: Si
form-data:
- amount: Double
- date: Date
- is_completed: Boolean
- student_id: Int

api/orders/{order}

Devuelve un order
Method: Get
Auth: Si

api/orders/{order}

Edita un order
Method: Put
Auth: Si
form-data:
- amount: Double
- date: Date
- is_completed: Boolean

api/orders/{order}

Borra un order
Method: Delete
Auth: Si

Products

api/products

Devuelve todos los products
Method: Get
Auth: Si

api/products

Crea un nuevo product
Method: Post
Auth: Si
form-data:
- name: String
- price: Double
- description: String
- category: String
- image: Image
- cafe_id: Int

api/products/{product}

Devuelve un product
Method: Get
Auth: Si

api/products/{product}

Edita un product
Method: Put
Auth: Si
form-data:
- name: String
- price: Double
- description: String
- category: String
- image: Image

api/products/{product}

Borra un product
Method: Delete
Auth: Si

Schools

api/schools

Devuelve todas las schools
Method: Get
Auth: Si

api/schools

Crea una nueva school
Method: Post
Auth: Si
form-data:
- name: String
- location: String
- is_open: Boolean
- user_id: Int

api/schools/{school}

Devuelve una school
Method: Get
Auth: Si

api/schools/{school}

Edita una school
Method: Put
Auth: Si
form-data:
- name: String
- location: String
- is_open: Boolean

api/schools/{school}

Borra un school
Method: Delete
Auth: Si

Students

api/students

Devuelve todos los students
Method: Get
Auth: Si

api/students

Crea un nuevo student
Method: Post
Auth: Si
form-data:
- name: String
- surname: String
- course: String
- birthday: String
- school_id: Int
- user_id: Int

api/students/{students}

Devuelve un student
Method: Get
Auth: Si

api/students/{students}

Edita un student
Method: Put
Auth: Si
form-data:
- name: String
- surname: String
- course: String
- birthday: String
- school_id: Int

api/students/{students}

Borra un student
Method: Delete
Auth: Si

Users

api/users

Devuelve todos los users
Method: Get
Auth: Si

api/users

Crea un nuevo user
Method: Post
Auth: Si
form-data:
- email: String
- password: String
- phoneNumber: String
- role: String
- profile_pic: Image

api/users/{user}

Devuelve un user
Method: Get
Auth: Si

api/users/{user}

Edita un user
Method: Put
Auth: Si
form-data:
- email: String
- password: String
- phoneNumber: String
- role: String
- profile_pic: Image

api/users/{user}

Borra un user
Method: Delete
Auth: Si
